FAST NUCES, Peshawar, Pakistan

OBJECTIVE

AI Developer with hands-on experience in **machine learning**, **deep learning**, and intelligent system development. Proficient in Python with **Scikit-learn**, **PyTorch**, **Keras**, and **TensorFlow** — building and deploying **end-to-end ML and DL models** using supervised, unsupervised, and neural network techniques. Backed by solid backend skills in **Django** and **Flask**, with production-ready DevOps experience in **Docker**, **Kubernetes**, and **CI/CD pipelines** to bring AI solutions from prototype to scale.

EXPERIENCE

- **COLAB Research Lab, FAST NUCES** 2024-2026
Member & Technical Presenter Peshawar, Pakistan
 - Participated as an active member in collaborative technical activities and learning sessions focused on Python and software development.
 - Conducted a Python workshop covering core programming concepts and data handling using NumPy and Pandas.
 - Assisted peers in understanding practical applications of programming, including automation and data processing tasks.
- **Aspire Institute** Present
Aspire Leaders Program – Cohort 2 Remote
 - Selected for a global leadership development program focused on **professional growth**, **problem-solving**, and **career readiness**.
 - Engaging in structured learning on leadership, communication, and real-world decision-making skills.
 - Collaborating with a diverse international cohort to develop a global perspective and teamwork abilities.

EDUCATION

- **FAST National University of Computer and Emerging Sciences (FAST-NUCES)** 2024 – Present
B.S. in Artificial Intelligence Peshawar, Pakistan
 - * Relevant Coursework: **Programming Fundamentals, Data Structures, Machine Learning, Linear Algebra, Probability & Statistics**
 - * Actively building projects in **Artificial Intelligence, backend development**, and **automation systems**.

SKILLS

- **Machine Learning & AI:** PyTorch, TensorFlow, Keras, Scikit-learn, Hugging Face, LangChain, OpenCV, MLflow, NumPy, Pandas, Feature Engineering, Model Evaluation & Tuning, Prompt Engineering.
- **Programming Languages:** Python, C, C++
- **Data Analysis & Libraries:** NumPy, Pandas, Matplotlib, Regex, Requests
- **Testing & Automation:** Pytest, Unit Testing, Automation Scripts
- **Version Control & Systems:** Git, GitHub, GitLab, Linux (Ubuntu)
- **Web Development:** Django, Flask, REST APIs, HTML, CSS, JavaScript
- **Databases:** SQL, SQLite, MySQL
- **DevOps & Tools:** Docker, Docker Compose, Jenkins, CI/CD Pipelines, Bash Scripting, Virtual Environments, SSH

AWARDS AND RECOGNITIONS

- **Bronze Medalist - Academic Achievement** 2025
National University of Computer and Emerging Sciences (FAST-NUCES)
 - Awarded Bronze Medal for outstanding academic performance during BS Artificial Intelligence degree.
- **Certificate of Appreciation - NUTEC Coding Competition Organizer** 2025
National University of Computer and Emerging Sciences (FAST-NUCES)
 - Recognized for organizing and managing a university-level coding competition under NUTEC.
 - Demonstrated skills in team coordination, event management, and technical supervision.

PROJECTS

- **Fraud Detection System using Machine Learning** COLAB Research Lab | 2026
Scikit-learn Project
 - Developed an anomaly-based fraud detection system using supervised and unsupervised learning techniques.
 - Applied feature engineering, preprocessing, and model evaluation using precision and accuracy metrics.
- **Customer Churn Prediction System** COLAB Research Lab | 2026
Machine Learning Project
 - Built a predictive model to identify customer churn using supervised learning algorithms.
 - Performed data cleaning, feature selection, and model optimization for improved performance.
- **AI-Based Disaster Alert and Prediction System** FAST-NUCES | 2026
Flutter + Machine Learning Project
 - Designed a multi-module system for flood and earthquake prediction using Decision Tree and Logistic Regression models.
 - Developed a Flutter mobile application with SOS alerts, chatbot assistance, and region-based predictions.
 - Integrated TF-IDF and KNN-based chatbot for disaster awareness and emergency guidance.
- **Probabilistic Ride Hailing Demand Modeling** COLAB Research Lab | 2026
Data Science Project
 - Modeled ride demand using Poisson and Bernoulli distributions to simulate real-world variability.
 - Analyzed temporal patterns to support demand forecasting and resource optimization.
- **CS Master's Program Data Scraper and Analysis** FAST-NUCES | 2025
Python Data Engineering Project
 - Developed a web scraping pipeline using Python, Pandas, and NumPy to extract university program data.
 - Performed data cleaning and analytical insights on tuition trends and program distribution.
- **Chatbot Assistant (Ollama/Mistral)** COLAB Research Lab | 2025
LLM / AI Assistant Project
 - Developed a rule-based assistant using LLM prompting (Mistral via Ollama).
 - Designed structured Q&A system for lab information retrieval and user interaction.
- **Django Calculator Web Application** COLAB Research Lab | 2025
Dockerized Web Project
 - Developed a Django-based calculator application supporting basic arithmetic operations.
 - Deployed using Docker and Docker Compose with port mapping and volume configuration.
- **CI/CD Pipeline Automation with Jenkins** COLAB Research Lab | 2025
DevOps Project
 - Built CI/CD pipeline integrating GitHub, Jenkins, and Pytest for automated testing and deployment simulation.
 - Implemented build automation using Jenkinsfile and virtual environments.
- **Automated Voting System Testing with Jenkins** COLAB Research Lab | 2025
DevOps Project
 - Developed a Python CLI application for voting eligibility with automated unit testing using Pytest.
 - Integrated Jenkins CI pipeline to execute tests on every commit.
- **Apache Service Auto-Recovery System** COLAB Research Lab | 2025
DevOps + Automation Project
 - Automated Apache server deployment using Puppet configuration management.
 - Implemented Monit-based monitoring system for automatic service recovery.
- **Secure SIP Voice Communication System** COLAB Research Lab | 2025
Networking Project
 - Developed a VoIP system using Asterisk with SIP-based communication between multiple clients.
 - Configured dial plans, SIP users, and softphones for real-time communication.
- **Apache Automation using Puppet and Monit** COLAB Research Lab | 2025
DevOps + Systems Project
 - Built a self-healing Apache server using Puppet for automation and Monit for monitoring.
 - Enabled automatic service recovery in case of system failure.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Foundations Associate (1Z0-1085-25) – Oracle
- LLM Engineering in Practice with Streamlit and OpenAI – 365 Data Science
